Our Team Performance

Improving Warehousing and Transportation Operation

- Reengineering and documenting of proposed processes.
- Identifying components needing immediate attention
- Cost benefit analysis
- Evaluation of organization structure, leadership, accountability and authority for all CSS operations
- Evaluation of current technology used in relation to all logistics operations
- Explore use of newer technology and evaluate corresponding benefit outlook

Strategic Planning & Supply Chain Network Optimization

- Strategic planning involved the understanding of CI's goals over 5-10 years of planning horizon
- Understanding of any new facilities during the planning window that may have an impact on strategic plan
- Expected growth patterns in demand
- Any changes to supplier locations
- Factors that could impact cost and/or service

Warehousing Layout and Productivity Analysis

- Detailed review of current state to include study of existing layout and processes
- Review of Information Technology
- Warehouse Management Systems
- Transportation Management Systems
- Labor Management Systems
- Order Management Systems
- Demand Planning Systems
- Inventory Management Systems

Fleet Management and Transportation Optimization

- Review of routing and dispatching processes
- Use of Information Technology as it stands today
- Application of any newer technology along with cost and service benefits
- Data analysis for cost and service improvements
- Use of dynamic routing or fixed routes based on their financial and service merits
- Use of advanced transportation strategies such as:
 - Cross-docking
 - Unidirectional and bidirectional pooling
 - Route optimization
